Innovation Award**

Winning design is
now available

Mouse Swing

The ingenious Mouse Swing is this year's winner of the inaugural Janet Wood Innovation Award, a competition run by Datesand Ltd to design a product that furthers at least one of the 3Rs.

The Mouse Swing, pure genius in its simplicity, clips easily on to the bars of most cages, increases the use of the 3-dimensional cage space and encourages climbing - a natural behaviour for mice.

It's very well known that the promotion of natural behaviours helps to prevent stereotypes developing in these animals.

As a further aid, the use of the double Mouse Swing to suspend a tunnel provides a refuge from

cage-mates or from accidental flooding. Behavioural studies with NSG mice show interaction with the swings during 40% of the observation session by touching, climbing, chewing or swinging.

- Encourages climbing and hanging
- Creates a refuge when used with a play tunnel
- Has an easy clip-on design
- Cost effective
- Autoclavable

Single and double swing designs available

Winner:
Lisa Doar - CRUK Manchester
